

Alarm-preserving decision support for PHM2018

A Reference pipeline (04b)

B Alarm-preserving architecture with JEV / LLM review routing

Dashed path: selective-LLM scenario. In 07b, all 271 rescue cases received LLM calls; MID-only routing (136 cases) reused saved outputs.

HIGH / MID / LOW are rank allocations (25% / 50% / 25%, with integer rounding), not calibrated failure probabilities.
